You may find the following aliases for our product names: TeamConnect for TeamConnect Enterprise Matter Management for TeamConnect Legal Matter Management TeamConnect Legal for TeamConnect Legal Matter Management CSM for TeamConnect Collaborati Spend Management Collaborati Spend Management for TeamConnect Collaborati Spend Management SOP or SOP Manager for TeamConnect SOP Manager Legal Hold for TeamConnect Legal Hold

ACKNOWLEDGMENTS

This product includes software developed by the following organizations:

Apache Software Foundation (<http://www.apache.org/>)

OpenSymphony Group (<http://www.opensymphony.com/>)

Indiana University Extreme! Lab (<http://www.extreme.indiana.edu/>)

The license agreements for these and other supplemental software packages can be found in your installation media in subfolder **Supplemental_Software_Licenses**.

That subfolder also contains *Open Source Components.pdf*, which lists the locations, license types, and specific versions of components that are available on the web.

Overview 5
Setup Requirements 5
Running The Tool..... 5

OVERVIEW

The XML Scanner Tool provides a method to check all screens for potentially problematic XML and JavaScript. After running the tool from the installation folder, an Excel spreadsheet will be generated that lists pages containing possible problems. It is important to note that the fact a page is listed in the spreadsheet *does not* mean that there is an error on the page.

SETUP REQUIREMENTS

In order to use the XML Scanner Tool, the following requirements must be met:

- XML Scanner Tool must be ran on a machine in the same network as the desired TeamConnect instance.
- XML Scanner Tool must be configured on a Windows machine (Windows 7 or higher)
- Java Run-time Environment (JRE) 1.7 or higher version must be installed.

RUNNING THE TOOL

1. Create a Design Snapshot by navigating to **Setup > Tools > Design Snapshot** and clicking the **Create Snapshot** button.
2. Download and extract the Design Snapshot ZIP file.
3. Move the XMLScannerTool.bat file and xmlscannertool-1.0-SNAPSHOT.jar file to the root of this design folder.
4. If a ScreenResults.csv file already exists in this folder, delete or rename this file.
5. Once the .bat and .jar file referenced in step 3 are in the root of your design snapshot folder, run the XMLScannerTool.bat file.
6. The ScreenResults.csv file will now be generated in the folder.

The CSV file generated will have the following columns: **Block Name, Object, File name, File path, Flagged attributes**, and an excerpt of **JavaScript**.
